Patent No. 5661021

GENERAL INFORMATION:

APPLICANT: Buchert, Johanna
APPLICANT: Sika-aho, Matti
APPLICANT: Vikari, Liisa
APPLICANT: Vikari, Liisa
APPLICANT: Penttila, Merja
APPLICANT: Saloheimo, Anu
APPLICANT: Mananase enzymes, genes coding for them,
TITLE OF INVENTION: methods for isolating the genes, and methods for bleaching lig
TITLE OF INVENTION: pulps
NUMBER OF SEQUENCES: 7
CORRESPONDENCES ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering_information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.
                                    prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' ASAGARAGATTCTCGACTTARTAANTAATCCCCCCCCCCCC 3']. CDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a was hydrodynamically sheared by repeated passage through a was blunt end-repaired with T4 DNA polymerase and T4 was blunt end-repaired with T4 DNA polymerase and T4 DNA 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10.5 Kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMO42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to

/done lib="Caberner Sauvignon Berry Post-Veraison - CAB7"
/done lib="Caberner Sauvignon Berry Post-Veraison - CAB7"
/note="Corgan: Berry; Vector: pDNR; Site 1: Sfil; Site 2:
Sfil; CAB7 is a cDNA library of Caberner Sauvignon Clone 8
berries. Samples were collected post-veraison from
field-grown vines during stage III of berry growth at 89
days after full bloom. Berries soluble solid concentration
ranged between 18-19 brix. Sampled vines were located at
the University of California, Davis, Experimental
Vineyand. cDNss were made by oilgo-dr priming and directi
onally cloned. S'and's' adaptors were used in cloning as
follows: S'-AAGCAGGCGCGACAGGTGGT(3T) and
S'-ATTTRAGAGCGGGCGCAATGT(3T) albrary was
constructed using the Clontech Creator SMRT kit and
size-selected to contain the 0.5-3 kb size fraction."

encoding . 1 ŗ. New mammalian histamine H4 receptor proteins and polynucleotides the proteins, useful in gene therapy for treating diseases where beneficial to elevate mammalian histamine H4 receptor activity.

Claim 13; Fig 5B; 92pp; English.

The present sequence is that of a mouse histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AANI0980-83) and polypeptides (see AANG0564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the trearment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful

The present sequence is that of a rat histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA clubtype, as predicted from a cDNA clone isolated from a spleen cDNA clibrary. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAA70980-83) and polypeptides (see AAA90564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing aschma, allergy, inflammation, cardinabetes mellitus, hypersylvemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PGLKESAASRHSESPRRKSSILVSLRTHMNSSITAFKVGSFWRSESAALRQREYAELLRG 300

                                                                                                                                                                       à
                                                                                                                                                                                          g
                                                                                                                                                                                                                                                              The present invention describes transmembrane receptors, preferably human grotein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention

```
The present amino acid sequence is the hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by FT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of their endogenous ligands, and to screen potential GPCR agonists and their endogenous ligands, and to screen potential GPCR agonists and antestudy of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in expression analysis to provide information about their function in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G-protein coupled receptor; GPCR; PFI-013; antiallergic; antiasthmatic; antiinflammatory; vasotropic; antidiabetic; anorectic; cytostatic; human; osteopathic; neuroprotective; nootropic; dermatological; gynecological;

This is a human G-protein coupled receptor (GPCR)-like polypeptide, PFI-013, encoded by cDNA of NCIMB 41073. The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of PFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vasculitic granulomatous disease, interstitial and cherry disease, including chronic obstructive pulmonary disease cherry plant of the proposition of disease, sensory organ disorders, sleep disorders and hair loss. The PFI-013 protein and nucleic acid are useful in the diagnosis and treatment of diseases associated with signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  358
                                                                                                                                                                                                                                                                                                                                    New G-protein coupled receptor-like polypeptide, polynucleotide for screening drug candidates for treating diseases associated with signal transduction e.g. allergic, inflammatory, pulmonary, neoplastic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   eosinophils from mammalian, especially human blood and for detecting the protein in biological samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 DFFVGVISIPLYIPHTLFEWDFGKEICVFWLTTDYLLCTASVYNIVLISYDRYLSVSNAV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to the human G protein-coupled receptor AXOR35 (AAB73621), to cDNA encoding AXOR35 (AAB24006), and to AXOR35 fragments and variants. Like all G protein-coupled receptors, AXOR35 has 7 putative transmembrane domains and is involved in signal transduction. AXOR35 has homology and structural similarity with G protein-coupled receptors such as the human histamine H3 receptor. The invention also relates to as the human histamine AXOR35 comprising AXOR35 DNA, to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleotides may be used to treat a wide variety of disorders including bacterial, fungal, protozoal and viral infections, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   myocardial infarction; stroke; ulcer; migraine; vonting; psychotic disorder; neurological disorder; anxiety; schizophrenia; psychotic disorder; neurological disorder; anxiety; schizophrenia; manic depression; bipolar disorder; depression; delixium; dementia; severe mental retardation; dyskinesia; Parkinson's disease; Huntington's disease; Huntington's disease; Gilles de la Tourette's syndrome; lymphocyte; macrophage; eosinophil; neutrophil; function modulation; autoimmune disorder; pulmonary disorder; gene therapy; vaccine; drug screening; signal transduction; transgenic animal; drug discovery.

Turnary recentor); actor near injuries injournation with the transfer of percoris; myocardial infarction; stroke; ulcers; magraine; vonting; psychotic and neurological disorders such as anxiety, schizophrenia, manic despression, delirium, dementia, and severe mental retardation, and dyskinesias, such as Parkinson's disease, Huntington's disease or Gilles de la Tourette's syndrome. AXOR35 proteins and molectides are useful as vaccines, and AXOR35 proteins, nucleotides and antibodies may be used in screening compounds for their ability to modulate AXOR35 activity or expression. Such AXOR35 modulators are modulate AXOR35 activity or expression. Such AXOR35 modulators are particularly useful for treating asthma, and inhibiting or promoting the function of lymphocytes, macrophages, essinophils or neutrophils in asthmatic lung. AXOR35 proteins, uncleotides and antibodies are also useful for inducing an inmunological response in a mammal against the abetection of multibody production. AXOR35 proteins are also useful for inducing an immunological response in a mammal against the above diseases, and for antibody production. AXOR35 mucleotides are also useful as diagnostic reagents, in chromosome localisation and tissue expression studies, and for producing transgenic animals useful in drug discovery. AXOR35-specific antibodies are useful for treating conditions associated with the expression of the AXOR35 protein. The present diabetes; obesity; anorexia; bulimia; osteoporosis; asthma; allergies; urinary retention; acute heart failure; hypotension; hypertension; angina or HIV-2 infections; pain; cancers; benign prostatic hypertrophy; \$

encodes the novel G used for treating psoriasis, schizophrenia, diabetes, enco-protein-coupled receptor (nGPCR) polypeptide (nGPCR-2067).

Claim 31; Page 63; 100pp; English.

This sequence represents a novel human G protein-coupled receptor (GPCR) designated nGPCR-2067. Like all GPCRS, nGPCR-2067 has 7 putative cransmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067, to antibodies specific for nGPCR-2067, to drug screening methods that use nGPCR-2067. And to modulators of nGPCR-2067 activity. nGPCR-2067 uncleic acid sequences may be used to isolate nGPCR-2067 activity. nGPCR-2067 and species homologues and may also be used in genetic mapping. The convention also discloses the use of nGPCR-2067 nucleic acids in screening crowattion also discloses the use of nGPCR-2067 nucleic acids in screening for a predisposition to nGPCR-2067-associated hereditary mental disorders, or for the diagnosis of these disorders. nGPCR-2067 nucleic acids in screening crockout animals, which may provide an insight into treating a variety of human disorders, and may also be used in the design of antisense conductions, particularly mental disorders, central nervous system conditions, particularly mental disorders, central nervous system

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                          This sequence represents the amino acid sequence of a human histamine receptor (HR) designated SP9144. The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity cloremostraphy, in immunoassay of histamine receptor, to identify cDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SYRTQHTGVLKIVTLMVAVWVLAFLVNGPMILVSESWKDEGS--ECEPGFFSEWYLLAIT

```
The present sequence represents a histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an anticent to elicit the production of antibodies. The histamine receptor polypeptide and polynuclectide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, arthritis, chronic obstructive pulmonary disease (COPD), rheumatioid arthritis, multiple solerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inositol phosphate and mitogen activated protein (MAP) kinase), changes in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+mobilization, mitogenic effects, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.

The present sequence is that of a human histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA clibrary. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAA70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 ceceptor activity. Recombinant protein is useful for identifying modulators of the human histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allersy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.

The invention provides an isolated histamine receptor, H4, which binds ligands comprising imidazole attached to amine by an alkyl chain. The H4 receptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphate (CAMP) formation when contacted with the H4 receptor and antibodies are used for identifying H4 receptor modulators. Modulation of histamine H4 receptors is useful cutoimmune pathologies such as multiple sclerosis, type I diabetes, the undimute pathologies such as multiple sclerosis, type I diabetes, the numbroid arthritis, cognitive and memory defects. The h4 receptor protein and nucleic acids are useful targets to identify drugs that are protein and nucleic acids are useful targets to identify drugs that are cffective in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for development of screening of molecules that interact with H4 receptors. CG development of screening of molecules that interact with H4 receptors. CG development of screening of molecules that interact with H4 receptors. CG development a disorder associated with the function of H4 in peripheral blood received with the function of H4 in peripheral blood received received with receptor provides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The present invention relates to a new G-protein coupled receptor (GPCR) colypeptide comprising greater than 70% amino acid sequence identity to polypeptide comprising greater than 70% amino acid sequence of human GPCRs TGRS2, TGR21, TGR130.2, thuman TGR213 or TGR22, 80% amino acid sequence identity to mouse TGR18 or 90% amino acid sequence identity to mouse TGR18 or cefined in the specification. The GPCR covalently linked to a solid phase is useful for identified compounds are useful for treating kidney disease, cerebral cavernous malformations, hyperlipidemia, obesity, dysbacxia and cardiac myxoma. The molecules of the invention are useful for diagnosing disorders or conditions such as kidney-related conditions or diseases continuary abnormalities, nephrotic syndrome, asymptomatic unitary abnormalities, rehal tubule defects, hypertension and curinary abnormalities, rehal tubule defects, hypertension and compliturations, functional disorders and jaundice and spleen-cassociated disorders and others. Modulation of the polypeptide of the invention is useful to treat or prevent any of the above conditions or diseases. TGR protein coupled receptors of the invention. This sequence represents the human GPCR TGR62 protein coupled receptors of the invention (AAU74904-AAU74911)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DFLVGLISIPLYIPHVLFNWNFGSGICMFWLITDYLLCTASVYNIVLISYDRYQSVSNAV 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            181 MLLEFLLPVISVAYFNVQIYWSLWKRRALSRCPSHAGFSTTSSSASGHLHRAGVACRTSN 240

The invention relates to an isolated G-protein coupled receptor polypeptide, AXOR35, (and its homologues and variants) and its encoding polynucleotide (and its homologues, variants, complements and RNA equivalents). Also included are an anti-AXOR35 antibody, an AXOR35 expression vector, producing a recombinant host cell by introducing the vector into a cell such that the host cell produces AXOR35, a membrane of the host cell expressing AXOR35, identifying/screening for agonists or

Homo sapiens

```
The invention relates to a human G protein-coupled receptor (GPCR)
appearing as ABU92259-ABU92277 (encoded by CDNAs ACA93256-ACA93274) named
hARE-3. hARE-4. hARE-5. hRUP3, hRUP5, hRUP7, hGPCR27, hARE-1,
-2, hPPR1, hG2A, hCHN3, hCHN4, hCHN8, hCHN9, hCHN10 and hRUP4.

Also included are a plasmid comprising a vector and one of the cDNAs
above and a host call comprising the plasmid. The GPCRs are useful for
the direct identification of candidate compounds as inverse agonists,
caponists or partial agonists. In viro and in vivo systems incorporating
caponists or partial agonists. In viro and in vivo systems incorporating
creceptors play in the human condition, both normal and diseased, as well
as understanding the role of constitutive activation as it applies to
understanding the signalling cascade. The cDNAs are useful for making a
comprobe for dot-blot analysis against tissue mRNA and/or RT-PCR
identification of the expression of the receptor in tissue samples. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
